FOREWORD

This report is the third of three parts on the characteristics of unemployed persons in Montana whose previous employment was in industries covered by the Unemployment Compensation Laws, Regulations and Rules for the State of Montana.

Data are presented as a statistical supplement to Reports No. 1, published March 1968 and Report No. 2, published May 1968. This supplement is composed of three principle tabulations. One series lists basic information by the entire State, with divisions for five major geographical areas and counties within each area. A second section compares common criteria between all claimants and those who had received, or were interested in receiving, vocational training. A third part is arrayed by areas and counties and covers popular occupations in which claimants expressed interest in training.

Tables shown are based primarily on the March 1965 survey, a period of seasonally high unemployment. Area and county information for the low unemployment period of August is limited. Reports No. 1 and No. 2 have State data for August in more detail. The complete methodology of this survey was incorporated into Report No. 1.

COUNTY AND AREA DATA

The counties of Montana are grouped into five geographical areas as delineated in the map on the cover. This division permits more comparisons of information common to counties in each respective area. This book also provides for immediate geographic identity of the county and claimant characteristics.

Criteria used in determining counties for each area include topography, climate, natural resources, land areas, type of agriculture and population. Economic reasons were responsible for placing several counties in adjoining areas, thereby causing some distortion of the geographic description.
